The cytokine macrophage migration inhibitory factor (MIF) is a major protein constituent of the anterior pituitary gland released into the bloodstream during endotoxaemia. For many years, MIF had been thought to be a T cell product associated with delayed-type hypersensitivity reactions. The identification of MIF as a pituitary 'stress' hormone provides an important link in the regulation of systemic inflammatory responses by the central nervous system. (30 Refs.)

ABSTRACT EP 307097 A2

Cytokines are water-insolubilized by acting a physiologically adaptable protein or high molecular organic acid on a cytokine, and thus obtained water-insolubilized cytokines retains physiological activity, and therefore, the water-insolubilized cytokines are useful as sustained release injections.

Treating conditions involving cytokine-mediated toxicity - using antisense, ribozyme or triple helix agent specific for migration inhibitory factor or migration inhibitory factor receptor; transgenic animal and monoclonal antibody production

AUTHOR: Bucala R J; Mitchell R A; Bernhagen J; Calandra T F; Cerami A PATENT ASSIGNEE: Picower-Inst.Med.Res. 1994

PATENT NUMBER: WO 9426307 PATENT DATE: 941124 WPI ACCESSION NO.: 95-006362 (9501)

PRIORITY APPLIC. NO.: US 63399 APPLIC. DATE: 930517

NATIONAL APPLIC. NO.: WO 94US5433 APPLIC. DATE: 940516

LANGUAGE: English

ABSTRACT: A new method for therapy of a condition involving cytokine-mediated toxicity involves administration of a migration inhibitory factor-inhibitor (MIF-inhibitor) or MIF-antagonist (e.g. small organic molecule, soluble MIF receptor or anti-receptor antibody), an agent which inhibits MIF gene expression (e.g. an antisense agent, ribozyme, triple helix component or steroid), an agent which inhibits MIF receptor gene expression (e.g. an antisense agent, ribozyme or triple helix component), and/or an agent which inhibits steroid-, toxin-, tumor necrosis factor-, interferon-gamma- or lipopolysaccharide-induced MIF release. The condition may be septic shock, inflammation, autoimmune disease, cachexia, virus or bacterium infection or toxicity of therapeutic steroids. A cell line or transgenic animal with inhibited MIF or MIF receptor gene expression is also new. A new monoclonal antibody binds immunospecifically to MIF. The new products and methods may be used for detection, therapy and studies involving MIF. (149pp)
